

HONEYWELL AEROSPACE

## DU-875 LCD Display One-For-One Upgrade

As the CRT in the DU-870 faces obsolescence, Honeywell is offering a \$35,000 trade-in credit on a one-for-one display upgrade for new, more reliable LCD displays. The credit for older displays is only being offered for a limited time as Honeywell phases out support for the older CRTs.

Upgrading to the new LCD saves downtime because the displays use the same location as the CRTs and take advantage of plug-and-play technology—there’s virtually no downtime. Not only are the screens brighter and clearer, they also weigh 7lbs less per unit than the old CRTs, and they consume far less energy, which lowers the cost of operation.

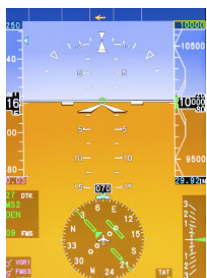

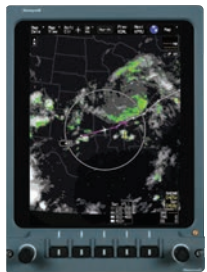

Additionally, you’ll eventually have to replace the CRTs from the DU-870 because Honeywell is no longer able to support these obsolete units—there are no parts available to repair the CRTs.

The DU-875 LCDs are certified for the following makes and models:

- Global Express/Global XRS/Global 5000
- Learjet 40/45
- Citation X/550/560
- Falcon 900EX/C
- Legacy 600/650

Once you upgrade to the LCDs, your cockpit is positioned for adding Honeywell’s Primus Elite with SVS (Synthetic Vision System) and adds XM Weather features and TCAS (Traffic Collision Avoidance System) symbols to the integrated map.

Duncan Aviation customers are invited to schedule their upgrades at any one of our 27 Satellite Avionics Shops or Workaway Stations ([www.DuncanAviation.aero/locations/#satellites](http://www.DuncanAviation.aero/locations/#satellites))
